

# AGE Handsomely

by Elizabeth Whitaker M.D., F.A.C.S.

## Popular Men's Procedures

You've taken care of your health and you want to look as good as you feel.

### Nonsurgical Body Contouring

Laser is the new standard in body contouring. SculpSure® targets the fat cells for permanent fat reduction up to 25% of stubborn fat in 25 minutes! Fast, effective, safe and comfortable. No side effects of freezing. A great way to reduce that spare tire or love handles without surgery.

### Hair Rejuvenation – PRP

Your own plasma, or “liquid gold” as we call it, is separated from other blood cells. Highly concentrated with growth factors it can be used to boost the growth of thinning hair. Best results with a series of treatments and supplements to support hair growth.

### Kybella Double Chin Treatment

Kybella dissolves fat in the dreaded “double chin” area. The fat is permanently gone, but it may take typically 2 to 4 treatments or more to reach full correction. It can be like chin liposuction without surgery.

### Neurotoxin

More men are learning the professional advantage a more relaxed, less intense expression can bring. If you have prominent frown lines or look like you're frowning when you're not, those muscles can be relaxed. No frozen look, just no frown!

### Injectable Fillers

Dermal fillers can diminish facial lines and restore volume to the face. If you have hollows, folds, or grooves these can be minimized. Under eye bags can be camouflaged to reduce that tired look. Natural looking so only you have to know.

### Sweat Gland Ablation

20% of adults experience hyperhidrosis or excessive sweating. This laser treatment destroys about 90% of sweat glands in armpits for permanent results. No more underarm stains!

### Laser Hair Removal

Permanently reduces unwanted hair on the back, chest, legs, arms, underarms and other areas. A series of treatments is needed for maximum results.
