

AGE Beautifully

by Elizabeth Whitaker M.D., F.A.C.S.

Signature "No Incision" Facial Contouring

Signature **Profile Lift**

Designed for patients of any age, particularly 20s to 40s, who are seeking better definition to their jawline and neck. Appearance on social media is a common concern, and the Profile Lift is a way to recontour and define the critical jaw and neckline area for a more sculpted profile. Performed through tiny openings for a laser fiber and cannula, fatty tissue is removed from the jawline and neck and laser skin tightening performed to maximize the resulting contour. Update your social profile, with our exclusive Profile Lift!

Signature **Precision Lift**

Designed for patients with early aging changes, including jowling and mild neck laxity and fullness, typically ages 30s to 40s. In addition to contouring the jawline and neckline, our exclusive Precision Lift also contours and reduces the jowls. Performed through tiny openings for a laser fiber and cannula, fatty tissue is removed from the jawline and neck, the jowl is contoured to reduce its volume, and laser skin tightening performed to maximize the resulting contour. The result is reduction and tightening of the jowl area as well as a "Precision" sculpted jawline and neck.
